

# Live Cell Analysis

With:

Denise Abda, BSMT (ASCP), HC, IMA

Denise has worked in allopathic medicine testing blood for over 25 years. She exhausted traditional treatment for her own health issues and learned that the answer to health can be found in prevention.

## What is Live Blood Microscopy?

It is looking at the living blood under a powerful microscope at the condition and quality of your blood cells.

## How does it work?

It works by obtaining a drop of blood from the fingertip, using a sterile lancet and then placing it on a microscope slide. You will then begin to see profiles of deficiencies, shapes of cells and digestive imbalances that show your overall wellness.

## Who can benefit from this?

Anyone who would like to change their health and bring complete vitality back into their body.

Live Cell Analysis is a demonstration and education of information that identifies the quality of red blood cells. Look inside to visualize a demonstration of how cleansing, juicing and balancing can help to change your health.

**Cleanse and Detoxify** – to get from unhealthy blood to healthy blood there are steps to assist you.

Detoxification is the first step in achieving balance and there are many ways to get started. We will discuss this during our session.

**Expect to notice some detoxification** taking place as your body becomes more alkaline and begins eliminating stored acids. You will be prepared for this while understanding the importance of this.

Looking forward to helping you succeed. Make your appointment today!
